AMITEYE FAVOUR OFEORITSE

Frontend Developer · Full-Stack Engineer

Lagos, Nigeria | ofeoritseamiteye03@gmail.com | +234 912 207 2401 | github.com/ofeoritse-amiteye | https://www.linkedin.com/in/ofeoritse-amiteye-760527263

PROFESSIONAL SUMMARY

Frontend-focused full-stack engineer with 4+ years building and shipping production-grade web and mobile applications, including AI-powered tools, secure real-time systems, and fintech platforms with live payment flows. Strong in React, Next.js, TypeScript, and Node.js, with experience designing scalable architectures using SSE/WebSockets, secure authentication systems, and payment integrations. Known for owning features end-to-end from system design to deployment, with a focus on performance, reliability, and real-world usability.

TECHNICAL SKILLS

Frontend: React 18, Next.js 16 (App Router), React Native (Expo), TypeScript, JavaScript (ES6+), Tailwind CSS v4, Radix UI, HTML5, CSS3

Backend: Node.js, Django (Python), REST APIs, Server-Sent Events (SSE), WebSockets, Prisma ORM, Axios, Nodemailer

Databases & State: MongoDB, Firebase (Firestore & Auth), MySQL, IndexedDB (idb), Zustand, TanStack Query v5, React Hook Form, Zod

Payments & Auth: Paystack (payments, transfers, webhooks), JWT (jose), bcrypt, OTP flows, OAuth-style integrations (Meta/TikTok/X)

Browser & Security: Chrome Extension APIs (Manifest V3), Web Crypto API (crypto.subtle), Service Workers, Vite, Turbopack, Rate limiting

AI Integration: Anthropic Claude API, LLM prompt engineering, AI-powered feature development

Infrastructure, Monitoring & Realtime: Cloudflare (CDN, edge routing), Pusher (real-time messaging), Sentry (error monitoring), PostHog (product analytics)

Tools & Platforms: Git, GitHub, Vercel, Expo, VS Code, Postman, React Router v7

EXPERIENCE

Lead Software Engineer (FullStack) — July 2025 – present

TrimHQ · Remote · trim-hq.com

- Architected and developed a production creator–brand marketplace, featuring campaign management, contract workflows, deliverable tracking, and dual-sided dashboards deployed with 20+ MongoDB models and a feature-based modular codebase across 500+ TypeScript/React files.
- Implemented end-to-end payment infrastructure with Paystack: wallet deposits, creator withdrawals, webhook reconciliation, transaction PIN security, and spend caps for unverified brands.
- Migrated file storage from MongoDB GridFS to Cloudflare R2 with presigned S3 uploads, and replaced SSE with Pusher private channels for real-time notifications and live dashboard updates.
- Built dual-sided KYC/KYB verification integrating Prembly (BVN, ID upload, CAC, director BVN) with spend-limit enforcement and verification-gated brand onboarding.
- Shipped JWT session auth with email OTP and Google/Facebook OAuth, Sentry error monitoring, PostHog analytics, Upstash Redis rate limiting, and PWA support with HTTP caching.

IT Support / System Engineer — July 2025 – May 2026

TopTech Engineering Ltd · Lagos, Nigeria

- Designed and developed a full internal ticketing and support system to streamline issue reporting, tracking, and resolution workflows, reducing average resolution time across the team.

- Provided end-to-end technical support for networking and hardware issues across multiple environments, maintaining near-zero downtime.
- Diagnosed and resolved software, hardware, and connectivity issues across 20+ devices and systems.
- Operated and maintained specialized data sanitization equipment (degaussing machine) in compliance with hardware handling standards.

Software Engineer (Freelance) Jan 2025 – July 2025

Self-Employed · Remote

- Designed, developed, and deployed 4+ full-stack web and mobile applications for clients across e-commerce, logistics, and education sectors, delivering all projects on schedule.
- Developed a fantasy sports application with real-time match scoring, head-to-head matchmaking, regional rankings, and continental leaderboards using React, Node.js, and Firebase.
- Provided ongoing client support and maintained application reliability post-launch across all projects.

IT Specialist Mar 2023 – Aug 2023

Heritage Energy Operational Services Ltd (HEOSL) · internship · Warri, Delta State

- Built a Django-based web application for computer-based testing that fully automated the company's internship recruitment process, eliminating manual effort for HR.
- Developed a hospital management system prototype using two parallel stacks (HTML/CSS/PHP and Django/Python), gaining comparative full-stack experience under production constraints.
- Delivered IT support across the organisation, diagnosing hardware issues and minimising operational downtime for 50+ staff members.

KEY PROJECTS

TRIM (Content Creator Marketplace) *2025 - Present*

Next.js 16 (App Router) · TypeScript · MongoDB · Prisma · Paystack · Tailwind CSS v4 · Radix UI · Zustand · Pusher · Cloudflare · PostHog · Sentry

- Production-grade two-sided marketplace with dual role-based experiences (Brand vs Creator) covering onboarding, campaign management, contracts, deliverables, real-time messaging, and wallet + payout flows integrated with Paystack.
- Engineered a money-safe wallet system: deposit/withdraw/payout with lock-before-transfer, compensating rollback on Paystack failure, fee tiers aligned with Nigeria transfer pricing, and webhook handling for settlement vs user balance reconciliation.
- Implemented real-time infrastructure using Pusher Channels for messaging, wallet updates, and live campaign state, ensuring low-latency, scalable event-driven communication without maintaining custom WebSocket servers.
- Designed infrastructure for performance and reliability using Cloudflare (CDN, caching, edge routing) to optimise global delivery and reduce latency.
- Integrated PostHog for product analytics and user behavior tracking, enabling data-driven feature improvements and funnel analysis.
- Implemented Sentry for real-time error monitoring, alerting, and debugging across production environments.
- Security-hardened sensitive flows: JWT sessions (jose), bcrypt passwords, hashed withdrawal PINs, OTP verification, and rate limiting on auth and financial routes.

Integrated Web Push notifications, Nodemailer transactional email, OAuth-style flows for Meta/TikTok/X social platforms, and cron endpoints for campaign automation.

Visual Query Builder *2026*

Next.js (App Router) · TypeScript · Zustand · TanStack Query · Tailwind CSS · dnd-kit · Vitest

- Built a schema-driven visual query builder supporting recursive condition groups with normalized, immutable tree state — enabling unlimited nesting depth without UI or performance degradation.
- Engineered a multi-target query generation engine with separate recursive traversals for SQL, MongoDB, and GraphQL previews — decoupled from state so outputs are side-effect free and independently testable.

- Implemented drag-and-drop sibling reordering scoped to each group's SortableContext via dnd-kit, ensuring predictable DnD behaviour across deeply nested tree structures without flattening the UI.
- Designed a query execution engine that evaluates rule trees against schema-owned mock datasets, combining group results with AND/OR logic — with SQL escaping, identifier sanitisation, and regex validation before tree entry.
- Shipped advanced UX including saved presets, execution history, JSON import/export with structural validation, dark/light theme, collapsible groups, and keyboard shortcuts.
- Optimised rendering via normalised tree updates, memoised recursive components keyed by stable node IDs, and paginated result views.

Glance (AI Browser Extension) *2026*

Chrome Extension (Manifest V3) · Vanilla JS · Anthropic Claude API

- Built a Chrome extension that summarizes any web page on demand using the Anthropic Claude API, called directly from a Manifest V3 service worker via the Fetch API.
- Architected with declarative content_scripts, a popup UI (HTML/CSS/JS), and background.js as a persistent service worker handling API calls and chrome.storage for session state.
- Implemented chrome.tabs and chrome.runtime.sendMessage for cross-context communication between popup and service worker, with clean error handling for API failures.

Whisper (Secure E2E Messaging Platform) *2026*

React · TypeScript · Vite · Tailwind CSS v4 · Web Crypto API · IndexedDB

- Built a secure messaging platform with true end-to-end encryption implemented entirely using the browser-native Web Crypto API (crypto.subtle), no third-party crypto libraries.
- Designed an encrypted-message outbox using IndexedDB (idb) for offline resilience, with TanStack Query v5 for server state sync and Zustand for client/session state management.
- Integrated Axios with JWT refresh interceptors for authenticated API calls, and React Router v7 for client-side routing across auth and messaging flows.

Fantasy Sports Platform *2023 – 2025*

React · Node.js · Firebase

- Developed a dynamic fantasy sports application supporting daily lineup management, real-time match scoring, and head-to-head matchmaking.
- Implemented regional and continental leaderboards with a slot-allocation system enabling global competition participation.

Multi-Purpose Student Assistant App *2023 – 2024*

React Native (Expo) · Firebase

- Delivered a cross-platform mobile app with 10+ features for campus life: class timetables, campus navigation, cafeteria schedules, smart reminders, and secure auth.
- Implemented real-time Firebase sync and full offline access, improving student task efficiency by an estimated 40%.

EDUCATION

BSc Management Information Systems *Jan 2021 – Jul 2024*

Covenant University · Ogun State, Nigeria

- Relevant coursework: Database Management, Software Development (Python, Java, C, C#), Data Analytics, Business Process Management, IT Strategy & Governance, Project Management.

Senior Secondary School Certificate (SSCE) *Sep 2017 – Mar 2019*

Willen Secondary School · Delta State, Nigeria
